### General Information

C&W Introduces the newest technology, a “smart” cleaning system for your dust collector that can monitor filter media and detect when the dust buildup on the filter media goes outside of an optimal level of performance. Smart-Clean then activates (fires) pulsing valves on an “as needed” basis, rather than just pulsing on timed intervals. This increases the cleaning efficiency of the collector and can save up to 70% on compressed air consumption. By eliminating over-cleaning of the cartridges, the life of the filter media will also be extended, further reducing costs. Smart-Clean can be retrofitted to your existing collector or included in one of C&W’s custom engineered dust control systems. Be Smart. Be Clean.

### Drawings

#### STANDARD ITEMS TO CONNECT YOUR DUST COLLECTOR:

- Clean Out Connector (connects to dirty chamber)
- Pressure Hose
- Tees to intercept pressure line, if using a magnehelic gauge
- Jumper to Connect Electrical
- Conduit and Terminal Leads to connect to Control Panel

#### RETRO-FIT AN EXISTING COLLECTOR OR INCLUDE WITH YOUR CUSTOM C&W DUST SYSTEM

Smart Clean Systems purchased with new C&W systems can be internalized into your control panel, saving space!
