

# DC Colt Decumulating Plant

## Starter Plant

Portable and Easy to Erect

Rock & Sand Can Be Weighed & Discharged Separately

Design Allows for Future Plant Expansion

Designed for Quick Loading from a Front End Loader

Proudly Made in the USA

**DC Colt Decumulating Plant**

The standard Stephens DC-Colt can be delivered in one load of freight. The plant is standard with 375 BBL silo (other sizes are available) and a 30" transfer conveyor. The plant is completely pre-plumbed and pre-wired with water meter and air compressor. The Stephens Colt is a low profile decumulating batch plant with a charging height of 12'3". The cement silo and batcher are both round and discharge by gravity. A flyash silo can be easily added.

Stephens DC-Colt Decumulating batching features:

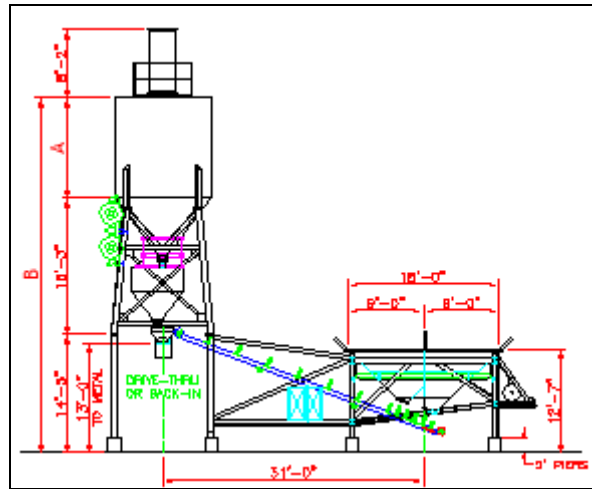

- Direct charging with front end loader
- Efficiency & accuracy equivalent to a plant with overhead storage
- Ideal starter/satellite plant with low initial cost
- Plant production capability can easily be increased with overhead bins

The **DC-12 Decumulating Plant** comes in either a portable or stationery model. The portable model has a full 12 yard capacity with legal towing height and width. The stationery model also has a full 12 yard capacity with a support structure designed to support future 150 ton bins.
